

## Presentation

It is both an honour and a pleasure for me to have been chosen to organise the Musculoskeletal Erasmus Course in Italy.

Therefore, I should like to welcome you to my city, which most of you probably know as it was the host city for the 2006 Winter Olympic Games.

My city offers many more attractions that I hope you will be able to visit i.e. The Egyptian museum (2<sup>nd</sup> only to Cairo), The Sabauda Court, The Cinema Museum, to name but a few.

Of course these are complimentary to the scientific commitment that will bring to us the know-how of some of the most well prepared European tutors and experts with long experience in the application of MRI to Musculoskeletal disorders.

I should also like to inform you that not only my department, but the entire first level Trauma Centre (Orthopaedic Hospital CTO) of which my department is part and its personnel is at your disposal should you wish to visit it and/or have an in depth vision of diagnostic and/or managerial questions.

As we say in Italian "Buon lavoro", I wish you all a good job...

*Carlo Faletti*

## Who Should Attend

Radiologists, residents in radiology, physicians requesting and using musculoskeletal MR in their clinical work. A basic knowledge of MR is required.

## Background and CME

This course is the musculoskeletal MRI module of the Erasmus program. The Erasmus program has been organizing interactive MR teaching courses throughout Europe since 1991. Erasmus students who have successfully completed all modules will receive the Erasmus MR diploma (see for further information [www.emricourse.org](http://www.emricourse.org)).

This musculoskeletal course is also endorsed by the European Society of Musculoskeletal Radiology (ESSR) and is part of the ESSR diploma (for further information see [www.ESSR.org](http://www.ESSR.org)).

Credits: ESSR diploma, European CME points

## Learning objectives

After participating to this course consisting of formal lectures, discussion generated by the students and teachers, and case oriented interactive teaching sessions, the participant will be able to:

1. Cooperate with physicist and technicians in optimising clinical MR protocols
2. Effectively select patients who will benefit from MR
3. Perform and analyze clinical musculoskeletal MR studies
